Conclusions

Oncolien® sheets are greatly appreciated for their practicality, intuitiveness and clarity, and are reported to meet the needs of the professionals. The ways of improvement suggested are: a format for smartphones and the addition of references used for the redaction of the sheets. Spreading the use of SFPO’s tools requires the emphasis to be placed on communication (via search engines, social networks, medical school…) in order to reach a public wider than pharmacists. New projects are scheduled: Oncolien® sheets for patients and OncoDisp, a new tool for drug delivery.
